

Structural Design of Steel Bins for Bulk Solids

CONTENTS

	<i>Page No.</i>
1 INTRODUCTION	2
2 MATERIALS	2
3 LOADS	2
3.1 Load Types	2
3.2 Load Combinations	2
4 SUPPORTING STRUCTURES	2
4.1 Analysis	2
4.2 Design	2
5 STRESS DISTRIBUTION IN STEEL BINS	3
5.1 Linear Analysis	3
5.1.1 General	3
5.1.2 Membrane Theory	3
5.1.3 Membrane Theory Solutions for Bins	4
5.1.4 Elastic Bending Theory	5
5.1.5 Ringbeams	6
5.1.6 Circumferential Stiffeners	9
5.1.7 Meridional Stiffeners	9
5.1.8 Corrugated Sheeting	10
5.2 Non-Linear Elastic Analysis	10
6 DESIGN AGAINST YIELDING	11
6.1 Bins Analysed Only by Membrane Theory	11
6.2 Bins Analysed by Elastic Bending Theory	11
7 DESIGN AGAINST BUCKLING	11
7.1 Cylinders and Cones in Longitudinal Compression	11
7.2 Cylinders in Circumferential Compression	13
7.3 Ringbeams and Circumferential Stiffeners	16
8 DESIGN AGAINST YIELDING AND BUCKLING	19
9 ANALYSIS FOR EARTHQUAKE LOADING	20
9.1 General	20
9.2 Ground-Supported Structures	20
9.3 Elevated Structures	21
10 FATIGUE	22
10.1 General	22
10.2 Low Cycle Fatigue	22
10.3 High Cycle Fatigue	23
11 BRITTLE FRACTURE AND LAMELLAR TEARING	26
11.1 Brittle Fracture	26
11.2 Lamellar Tearing	26
12 REFERENCES	27
13 NOTATION	29
