

Software Examples & Application Detailing Vendors

Strucad:

Strucad is distributed by Acecad Software (Australia) P/L which is a provider of structural supply chain solutions for Steel Building Structures in the Architectural, Engineering and Construction (AEC) market, and Plant Structures in the Process and Power markets.

With Fabrication Information Modelling (FIM), a practical and immediately available implementation of the Building Information Modelling (BIM) methodology, users are enabled to efficiently manage the supply chain through each stage and collaborate between contracting companies.

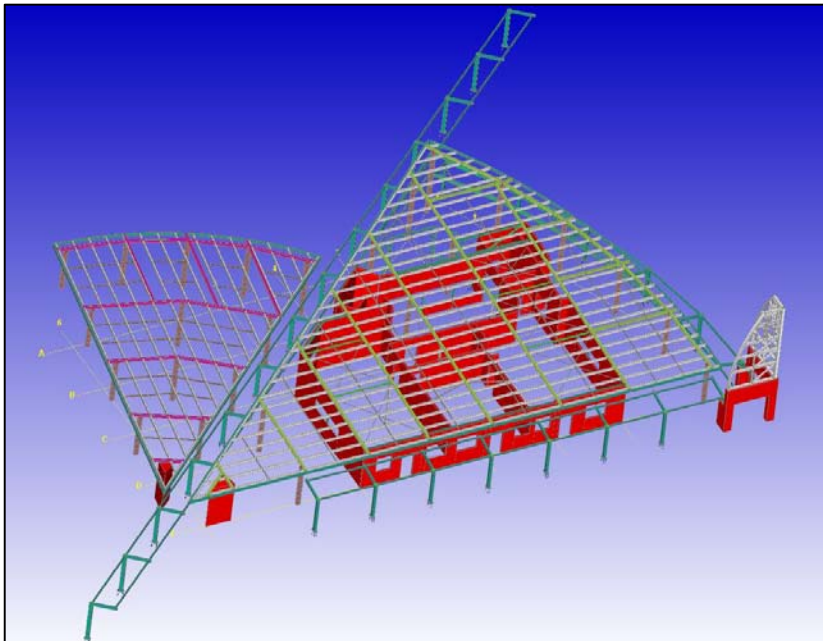

Extensive domain knowledge of the international steel design, detailing, fabrication and erection processes have enabled development of these unique solutions; rendering the construction process more open, transparent and accessible through the supply chain to reduce design, fabrication and construction schedules and costs.
