

Overview of Discipline

This section is intended to briefly explain the function along with the various tasks that each of the listed disciplines undertake as part of a project or design team, with special reference to the use of 3D modelling technologies.

- Client
- Architect
- Engineer
- Building Services
- Detailer
- Fabricator
 - Erector
- Main Contractor
 - Project Manager
 - Site Management

The generation of 3D models and the use of BIM are now acknowledged as being crucial to the future of the design and construction industry. Used in isolation by the various disciplines, these new technologies have limited potential within the supply chain however when the model becomes the shared resource within the project the benefits are enormous..
